

Guideline 9.1.5 - First Aid Management of Harness Suspension Trauma

Summary

Who does this guideline apply to?

This guideline applies to adults, adolescents and children

Who is the audience for this guideline?

This guideline is for use by bystanders, first aiders and first aid training providers

Recommendations

The Australian and New Zealand Committee on Resuscitation (ANZCOR) makes the following recommendations:

1. Send for an ambulance [Good Practice Statement]
2. Rescue the person and place in a lying position as soon as it is safe to do so [Good Practice Statement]

Abbreviations

Abbreviation	Meaning/Phrase
ANZCOR	Australian and New Zealand Committee on Resuscitation

1.0 | Introduction

Suspension trauma, or orthostatic shock, has been reported to affect people who are suspended

within a body harness for a prolonged period of time (more than 10 min).^{1,2,3} It may result in loss of consciousness or death. This is thought to occur as a result of low blood pressure due to blood pooling in the legs combined with an increase in the activity of a part of the nervous system that slows the heart (vagal tone).³

2.0 | Recognition

The signs and symptoms of suspension trauma are the same as shock. Harness suspension trauma should be considered where the person has been suspended by a harness, and are exhibiting any of the following:⁴

- feeling faint or dizzy
- breathlessness
- sweating
- looking pale
- nausea
- low blood pressure
- loss of responsiveness

3.0 | Management

- Call for an ambulance.
- If safe to do so, free the person from the harness.
- If not responding, manage as per ANZCOR Basic Life Support flow chart [Refer to ANZCOR Guideline 8]
- Rest the responding person in a position of comfort, ideally lying down, and provide reassurance.
- Loosen or remove harness.
- Administer oxygen if available.
- Look for and manage any associated injuries, particularly for those who may have fallen or been electrocuted.
- Monitor level of response and breathing at frequent intervals.

Some agencies have previously recommended that those with suspension trauma are maintained in a sitting position and avoid lying flat for 30 minutes⁵. This review has found no evidence to support this practice and it may be harmful.

About this Guideline

Search date/s	January 2020
Question/PICO:	For people suspended in a harness for a prolonged period awaiting rescue, what interventions are effective in the prevention of poor clinical outcomes
Method:	Scoping literature review
Primary reviewers:	Finlay Macneil
Other consultation:	Kevin Nation

Worksheet	<ul style="list-style-type: none"> ◦ Worksheet to support ANZCOR Guideline 9.1.5 – First Aid Management of Harness Suspension Trauma April 30, 2021 (0.3 MiB)
Approved:	April 2021
Guidelines superseded:	ARC Guideline 9.1.5 - July 2009
